

PROJECT REPORT: DIGITAL LITERACY

Title Page

Name: Manjit raj krish

Registration Number: 25BSA10179

Branch: B.Tech (cloud computing and automation)

Year: First Year

Course Code: CSE0001

Course Title: Digital Literacy

Date: 31/03/2026

Introduction

Students must possess strong digital literacy skills in today's digital world. My job as a Student Digital Ambassador is to assist peers in learning how to communicate professionally, use digital tools efficiently, and stay safe online. Through hands-on activities like making an infographic, building a digital portfolio, investigating online platforms, learning email etiquette, and comprehending cybercrime, this project aims to raise awareness of digital literacy. I was able to obtain practical experience with key digital tools and concepts through each task. In addition to increasing my technical proficiency, this project raised my awareness of responsible digital behaviour, which is essential for both academic and professional development.

Task 1: Infographic

For this task, I created a digital literacy awareness infographic using Canva. The infographic includes key topics such as the meaning of digital literacy, safe internet practices, useful digital tools, and email etiquette. I designed the layout to be simple and visually appealing, using icons and minimal text to make the information easy to understand.

The infographic highlights the importance of using strong passwords, avoiding suspicious links, and maintaining a professional online presence. It also introduces tools like GitHub and Google Docs that are useful for students.

One challenge I faced was organizing all the information in a clean and structured way without making the design look crowded. However, this task helped me improve my design skills and understand how to present information effectively using visuals.

Task 2: Digital Portfolio

In this task, I created my digital presence on platforms such as GitHub, LinkedIn, and Kaggle. GitHub is used to showcase projects and coding work, LinkedIn helps in professional networking, and Kaggle is useful for data science practice.

On GitHub, I created a profile and added a README describing my background and goals. On LinkedIn, I updated my education details, including my degree and institution. These platforms are important for building a strong professional profile and will help me in internships and placements in the future.

Over the next four years, I plan to regularly update my GitHub with projects, improve my LinkedIn profile by adding skills and achievements, and explore Kaggle to enhance my analytical skills. This task helped me understand the importance of maintaining a professional online identity.

Task 3: Platforms

For this task, I explored both coding platforms and collaboration tools. I created an account on HackerRank and completed a beginner-level problem, which helped me understand the basics of problem-solving and coding practice.

In the second part, I created a Google Form quiz on digital literacy with five questions. The form included multiple-choice and short-answer questions to test awareness about online safety and digital tools. I also viewed the responses in Google Sheets, which showed how data can be collected and analyzed efficiently.

These tools are very useful academically, as coding platforms help in improving programming skills, while Google Forms can be used for surveys, quizzes, and data collection. This task enhanced my understanding of online collaboration and practical digital tools.

Task 4: Email Etiquette

In this task, I learned how to write professional emails and understand proper communication etiquette. I drafted two emails: one requesting an assignment extension and another expressing interest in an internship. Both emails included a clear subject line, proper greeting, structured content, and a polite closing.

I also created a social media Do's and Don'ts checklist to promote responsible online behavior. Poor digital communication can lead to misunderstandings or missed opportunities. For example, sending an email without a subject or using informal language can create a negative impression.

This task helped me understand the importance of clarity, politeness, and professionalism in digital communication.

Task 5: Cybercrime Awareness

While researching cybercrime, I learned about UPI fraud and how easily people can be tricked into sharing sensitive information. I was surprised to see how attackers use simple techniques like fake calls and urgent messages to manipulate users.

This task made me realize the importance of being cautious while using online payment systems. Even a small mistake, such as clicking on a suspicious link or approving a request, can result in financial loss.

One habit I will change is that I will never share my OTP or approve unknown payment requests without verification. I will also follow safe practices like using secure apps and reporting any suspicious activity immediately.

Conclusion

This project provided a comprehensive understanding of digital literacy and its importance in everyday life. Through various tasks, I learned how to use digital tools effectively, communicate professionally, and stay safe online. It also helped me build a strong foundation for my digital presence, which will be useful for my academic and professional career. Overall, this project enhanced my awareness, skills, and confidence in navigating the digital world responsibly.
